

- INSTRUCTION MANUAL -

PAO STEEL PENDANT

DESIGN BY NAOTO FUKASAWA

HAY

TECHNICAL DATA

This product is fitted with two E27 (EU) or E26 (US), or one E14 (EU) or E12 (US), or one LED G9 bulb fitting. HAY recommends using this product with LED bulbs. For dimming, please check which LED bulbs are compatible with your wall mounted dimmers.

LARGE Ø47 CM

FITTING TYPE | E27 (EU) or E26 (US)
POWER (W) | 8-15 W
COLOUR TEMPERATURE | Warm white

MEDIUM Ø35 CM

FITTING TYPE | E14 (EU) or E12 (US)
POWER (W) | 5-8 W
COLOUR TEMPERATURE | Warm white

SMALL Ø23 CM

FITTING TYPE | LED G9
POWER (W) | 3.5-5 W
COLOUR TEMPERATURE | Warm white

HAY will not accept any responsibility for any accidents, injuries or damages that occur due to the use of incorrect bulbs.

ATTENTION

Ensure that the power supply to the circuit has clearly been turned OFF before installing the product. In some countries, electrical installation must be carried out by authorised electricians/contractors; please check with your local authority for guidance.

The product must not be modified in any way.

HAY accepts no responsibility for any products that have been modified or tampered with. If the external flexible cable or cord of this luminaire is damaged, it should be exclusively replaced by a qualified electrician in order to avoid an electrical hazard. This lamp is designed for indoor use only.

- The Pao Pendant is designed to be used with LED-based light sources only.
- Halogen or incandescent light sources should never be used, as they may cause damage to the lamp.
- HAY accepts no responsibility for any damage due to the use of incorrect light sources.

CARE AND MAINTENANCE

The product can be cleaned with a soft damp cloth and mild detergent, or a dry microfibre cloth. Do not use alcohol or any other solvents to clean the product and avoid using abrasive or rough sponges. Ensure that the power supply has been turned OFF before cleaning the product.

- PARTS -

Ceiling Canopy

Shade

Steel Bracket

Diffuser

1.

Unpack all the parts and check that you have received all the parts listed.

Pull the ceiling cap away from the internal magnetic bracket. Loosen the transparent cover and cable grip with a screwdriver and gently remove the cable, pulling it through the cord grip carefully. Remember to also loosen the terminal block connections if the connecting wires are fixed in place there, before pulling the cable through the cord grip.

2.

If you have an existing junction box or cross bar in the ceiling, you can skip next step.
Use a pencil to mark fixing holes either side of the cable exit hole on the ceiling.

3.

Drill holes and insert wall plugs. Ensure you use the correct type of drill and wall plug / anchor for the material you are drilling into.

4.

Trim the cable to the desired length, leaving 35 mm / 1.4 in of basic single insulation exposed for wiring.

5.

There is a 5 mm / 0.2 in wire strip guide provided on the internal transparent cover, as shown below. Strip 5 mm / 0.2 in of exposed wire carefully, ensuring both layers of insulation are intact and not damaged.

6.

It is advised that any wire exposed with just a single basic layer of insulation is covered with the protective heat shrink provided. (Two sleeves for the basic insulated wire and one sleeve for covering the opening of the pendant cable).

7.

A heat gun can be used to shrink and fix this protective insulation in place, as shown below.

8.

Replace the pendant's cable at the desired length, fix the cord grip sleeve in place and tighten the cord grip, as shown on the clear ceiling bracket. Ensure there is a distance of at least 3 mm / 0.12 in between the opening of the pendant cable and the opening of the sleeve.

9.

It is advised that any wire exposed with just a single basic layer of insulation is covered with the protective heat shrink provided. (Two sleeves for the basic insulated wire and one sleeve for covering the opening of the source cable).

10.

A heat gun can be used to shrink and fix this protective insulation in place, as shown below.

Screw the clear ceiling bracket into the ceiling, ensuring there is enough cable exposed to connect both positive and neutral connections into the terminal block. Use the integrated terminal block on the clear ceiling bracket to connect the live and neutral wires. Both Live (L) and Neutral (N) are clearly marked on the clear ceiling bracket.

The Ground (E) connection is only to be used for connecting the source ground connection, and is separate from the integrated terminal block, as shown below.

POWER OFF

Make sure that the power is switched off

MAX. 6 A at 220-240V

The terminal blocks of the clear ceiling bracket are integrated into a junction box with a loop-in feature. This can be utilised in a number of different ways to optimise the wiring of electrical fittings used in your environment, either for single light fixtures and switches, multiple light fixtures to a single switch, or even lamps and ceiling fans connected to a single switch.

The below illustration is one example of how this feature can be used to connect multiple light fixtures to a single switch. Max. 3 of the luminaires can be interconnected.

(Max. current for looping: 0.2056A). Please note that it is advised that a qualified electrician installs multiple light fittings or ceiling fans that utilise this loop-in feature of our ceiling canopy.

13.

Check to ensure that the protective heat shrink, the cable restraints and cord grip sleeve are still in place after fitting all the wires. Check that all of the Live, Neutral and Ground connections are securely connected before switching the power back on at the mains. Ensure there are no loose cables or exposed bare wires and that the clear ceiling bracket is securely fixed to the ceiling.

If utilising the mouse hole cable exit, please note the internal cable restraint and integrated cable clamp. The cable clamp tab can be removed and cut to length to suit the cable thickness used, if this is larger than what is already provided.

For the source cable, it is advised that any wire exposed with just a single basic layer of insulation is covered with the protective heat shrink provided (Steps 4 - 7). Replace the cable clamp tab, slotting it back into the mouse hole exit. This will clamp the cable tightly when the cover is screwed into place. Please note that the transparent cover may be located in a separate bag in the box.

15.

Replace the protective transparent cover over the terminal and clear ceiling bracket, screwing it in place with the three fixings provided. This will isolate the internal electrics during use. Replace the outer magnetic ceiling cap over the assembly, ensuring the mouse hole exits are lined with the bracket and cap if you intend to utilise this feature.

16.

Lift the shade to access the bulb holders.

17.

Insert the recommended bulbs into the bulb holders. If possible, we advise two people carry out this task; one holding the shade and one inserting the bulbs.

18.

Screw the bulb into the bulb holder, which is located underneath the steel bracket. Repeat on the other bulb holder.

ATTENTION

Do not touch the cables

19.

Replace the shade.

If the diffuser is visible underneath the shade (fig. 1) or the diffuser is too far inside (fig. 2), the shade can be adjusted so that the shade and diffuser are aligned.

21.

To adjust the placement of the diffuser you need to lift the shade. Again, we recommend two people carry out this task; one to hold the shade and the other to adjust.

Adjust the height of the shade by screwing the plastic adjuster until the bottom edge of the shade and the diffuser are aligned. Screw it clockwise to lower the shade and counterclockwise to lift the shade.

ATTENTION

Do not touch the cables

23.

Once all the steps have been carried out, the lamp is ready for use. Please note that there are several alternative configurations for hanging your Pao Pendant/Pendants other than directly below the supplied ceiling canopy, if the power supply is not conveniently located. Once again, please note that it is recommended that a qualified electrician installs your pendant lamps.

- CARE & MAINTENANCE -

Our Care & Maintenance offers guidance for optimal maintenance of your HAY product. It includes advice and instructions on cleaning and caring for specific materials to prolong the life of your lighting.
